Mitochondria [1]

By: Guerrero, Anna  Keywords: Organelles [2]
Object is a digital image of a mitochondrion. There are two boxes, one atop of the other. In the top box is the nucleus within, two orange mitochondria that are smaller than the nucleus, and several other organelles.

Mitochondria are organelles found in the cytoplasm of eukaryotic cells. They are composed of an outer membrane and an inner membrane. The space between the two membrane layers is called the intermembrane space, and the space within the inner membrane is called the matrix.
