The Process of Gastrulation in Frog Embryos [1]

By: Michaels, Chinami  Keywords: vegetal pole [2] animal pole [3]
A diagram illustrates the movement of the three hemispheres of cells: the animal cap (dark green), the marginal zone (lime green), and the vegetal cap (yellow). The diagram shows the internal view of gastrulation, with cross-sections through the middle of the embryo. The processes of gastrulation involve the migration and transformation of these cell hemispheres to form the three germ layers: the ectoderm, endoderm, and mesoderm.
